EDUCATION

GOLDSMITH'S, UNIVERSITY OF LONDON | MFA in Computational Arts, ongoing

UNIVERSITY OF EDINBURGH | Postgraduate diploma in Design Informatics

UNIVERSITY OF MANCHESTER | BSc in Computer Science and Mathematics, First Class Honours

RECENT WORK EXPERIENCE

LEAD WEB DEVELOPER | Kofein Design Studio , March 2026 - ongoing in Ljubljana

- ✢ Leading development of a new Slovenian lexicographical e-dictionary platform, including applied research into integration approaches for surfacing model-generated lexical content (GAMS model) within a production dictionary interface.

UNITY DEVELOPER | Idle Duck Studio , January 2025 - February 2026 in Ljubljana

- ✢ Developed, tested, deployed and analysed the performance of hyper casual mobile games. Published a title "Bus Stop Jam" in collaboration with Voodoo

FULL STACK DEVELOPER | Giga Design Studio , November 2023 - December 2024 in Milan

- ✯ Developed experimental games and interactive installations with Fantamagico , an experimental game development collective, which is a department of the Giga Design Studio.
- ✯ Contributed to the development of a large virtual "multiplayer" art exhibition space in the browser, called superinternet.world , where artists are given a cube with empty canvases for walls, which they can fill with their art with a simple Microsoft Paint-like brush tool. Users visiting the virtual space can walk through the "rooms" as if in a museum and enjoy the art. The canvases in every room are stitched together and exist as an nft, maintained in a smart contract on the Polygon blockchain network.
- ✯ Lead the development of the Luisa project. Exhibited at the Milan Design Week.
- ✯ Collaborated with brands such as North Face and Ottolinger on complex technical pipelines as part of their marketing campaigns.

WEB DEVELOPER | Calibro Studio, October 2022 - November 2023, in Milan

- ✶ Developed a custom image viewing system for large scale image libraries or archives. Based on WebGL, the system was designed to be adaptable to many different projects. Since it deployment it has been used in an internal studio project with Istituto dei Ciechi and Wikimedia Italia.
- ✶ explored the changing presentation of people in domestic spaces in the IKEA Catalogue archive throughout the 70 years of its publishing. We ran a people recognition script on every image in the archive and cut the people out of the scenes, whilst holding on to the original image of the scene. These images were then visualized in a temporal mosaic.

E-RESEARCHER | Oxford University , January 2022 - August 2022, in Edinburgh

- ☆ Explored the data visualization design space for various kinds of Covid-19 monitoring data in order to support the modeling scientists and epidemiologists in the Scottish COVID-19 Response Consortium.
- ☆ Designed and deployed hundreds of live-data dashboards with charts segmented on multiple levels of British governance from local municipalities to the national level all of them assembled into a website used by actual lawmakers and other stakeholders.

DESIGN RESEARCHER | Hogeschool van Amsterdam , February 2021 - November 2021, in Amsterdam

- ✷ Developed an autonomous web-scraping system, specialized for scraping YouTube video and personalisation data, by generating sessions of video - watching in order to monitor and visualize different agnostic user journeys into Youtube's rabbit hole.
- ✷ Created a website for the showcase of the project results allowing the audience to explore datasets visualized in a force directed graph network based on different session datasets, visualizing clearly how some watching journeys ended up in topic rabit holes and were influenced by topic drift.
- ✷ Participated in monthly meetings with the project partner The Institute of Network Cultures

RECENT PERSONAL PROJECTS

ANATOMY OF A HAUNTING | Interactive installation, at the Museum of Modern Art in Ljubljana

- ❁ Built a multi-device museum installation where one server coordinates four interactive desks, spatial audio, lighting, and a film projector in real time.
- ❁ Linked visitor input to physical vintage show elements, circuit bending old speaker buttons to trigger synchronized subtitles, multi-channel sound, lights, and automated projector sequences.
- ❁ Set up scheduled daily operation and recovery after outages, with simple runbooks so gallery staff can run the show without technical support. Exhibiton content available here

WEIRD ATTACHMENTS | in the browser, part of exhibitions, in Ljubljana

- ❀ Digital publishing platform with a custom reading experience. Built with React/TypeScript and a TipTap-based rich text editor, custom extensions for multimedia, and a mobile-first pagination algorithm that handles page breaks, atomic elements, and content flow in a kindle-like manner.
- ❀ Implemented interactive footnotes with inline popups, audio-synced karaoke text blocks with word-level timing, and real-time collaborative editing using Firestore with version conflict resolution.
- ❀ Developed a responsive UI with custom typography, ink-style text effects, touch-based navigation, and reading position tracking. The website was part of an exhibition at MoTa Ljubljana

FALL11 | part of an exhibition, in London

- ❤ End of First-year MFA project, exhibited at the St Hatcham's Church exhibition space of Goldsmiths, University of London.
- ❤ Reconstructed machine photography from the Imagenet-fall11 dataset by using inpainting and outpainting in order to stitch images from the imagenet-fall11 dataset together into larger scenes and photographic pictures. Developed a custom image-generation pipeline using Stable Diffusion, LoRA fine-tuning, and ControlNet to reconstruct and extend scenes from the ImageNet Fall11 dataset

GARDEN PAINTING | in the browser, in exhibitions, in London

- ✿ A browser-based installation on view at The Goldsmiths St Hacham's Church Exhibition space.
- ✿ A gesture control model is made to doodle a child-like painting onto a canvas with a voxelated grid with predefined regions of where a doodle category is allowed to be drawn. The brush, together with the canvas makes for a water painting style mechanism programmed with GLSL shaders.

MEMENTO | in the browser, in Edinburgh

- ✦ Explored the state of our collective discourse on the internet through the lens of tweets on a specific topic categorized under a hashtag. The tweets were arranged in 3D space as singular points connected with scribbled lines if they were contained in the same thread.
- ✦ The central premise explored was how far in time a certain piece of news or a news topic travels in relation to the concept of "information fatigue".

FINDING LIVABLE CITIES | bachelor dissertation (first class honours), in Manchester

- ✦ Generated an OpenStreetMap based image dataset of 1km x 1km maps of urban centres around the world, comprising of 176 thousand locations.
- ✦ Used disentangled variational autoencoders to reduce maps to their latent space vector representation in order to compare the geometric features of their urban structure. Visualized the data in an interactive Web application based on Mapbox GLJS.
